

Lesson Plan 1 | Form 2 | Review of Form 1 Material

Objective

Students will have their memories refreshed about last year's topics.

Warm-up

This is the first lesson of the year for Form 2, so a brief several minute (re-)introduction of the teacher, general expectations, and so on is to be done here.

Presentation

None.

Guided Practice

Ask students for any questions they have on the main topics from Form 1, specifically:

- computer hardware
- binary and logic
- data sizes, types, etc.
- HTML and CSS
- Python

Independent Practice

None, as this is review.

Closing

Remind students that the material covered today is a review of that discussed in Form 1, and as such it is the student's responsibility to seek out the teacher for any further questions or extra help on these topics.

In Hindsight

01/18/2017: A good way to get the conversation going was to ask for volunteers to convert a binary number to decimal and vice versa at the board. Most people answered questions correctly and remembered details from last year, so this review is likely unneeded for some students but I think it's better to have it than to jump straight into new content on the first day.
